

Quality & Safety

Material Safety Data Sheet (MSDS) for ELISA Reagents

The ELISA (enzyme-linked immunosorbent assay) reagents for the detection of plant pathogens all consist of purified antibodies (IgG) from mouse, rabbit or sheep and alkaline phosphatase-labeled antibodies (IgG).

- Use: For detection of plant pathogens (viruses / bacteria / fungi / phytoplasma) in ELISA.
- Health: For laboratory use only.
 Not for use in human or animal applications.
 Do not ingest.
 Keep away from children.
 Solutions stabilized with sodium azide.
- Flammability: Not applicable.
- Storage: Store at 4° C.
- Reactivity: Not applicable.

BIOREBA AG guarantees that the ELISA reagents have been thoroughly tested and meet the specifications indicated on the specific Product Information and the Datasheet (delivered with the products). BIOREBA AG cannot be liable for any damage incurred due to incorrect handling or storage of these products.
